MORE THAN MICROSCOPY

LS

BA210

BIOLOGICAL MICROSCOPE

The new BA210

With the BA210 Motic is setting a new standard in microscope performance through **improvements both in optical and mechanical features** for the student level.

Designed to be used in **Educational life science, Medical and a variety of Biological applications**, the new BA210 is designed for ease of use and longevity due to Motic's complete understanding of the daily demands placed on the standard educational microscope.

Working together with **a new generation of Plan Infinity Achromatic objectives** provide a fully corrected intermediate image for crisp and clear visual and digital results.

Whether using the new powerful **3W LED** version, light consuming contrast methods like Polarization, Darkfield, Phase Contrast are easily performed.

Motic **BA210 is a robust laboratory and medical instrument** that brings professional, **repeatable image quality** results to all of its intended applications for medical diagnosis or biopsy, Darkfield and Phase contrast to examine the blood cells in haematology and fluorescent contrast to diagnose Malaria and TB diseases.

BA210 Standard Specifications

Model	BA210
Optical System	Color Corrected Infinity Optical System [CCIS®]
Obsevation Tube	Widefield binocular 30° [F.N.20] Widefield trinocular 30° [F.N.20] - light distribution 100:0/20:80
EYE-Piece	Wide field WF 10X FOV-20mm Wide field WF 15X FOV-12mm
Nosepiece	Reversed quadruple
Stage	140 x 135mm surface; 76 x 40mm movement; coaxial controls Both side Reckless stage
Condenser	N.A. 1.25 Abbe condenser with slider slot; Focusable and Lockable
Focus	Brass gears Z-Axis movement 25mm stroke Fine focus with 2µm minimum increment, Coarse focus with torque adjustment
Illumination	Built-in transmitted 3W LED critical illumination; Attachable Mirror set

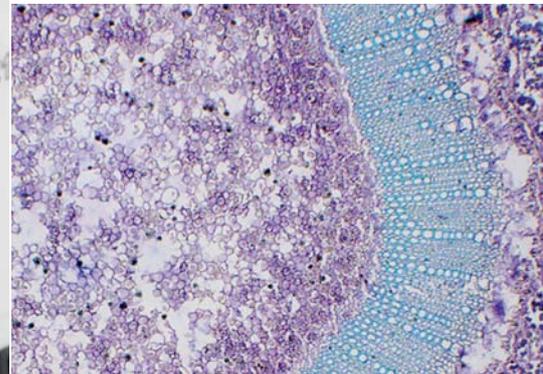

Objectives

To improve the overall optical performance of the BA210, Motic introduces a new generation of Plan Infinity Achromatic Objectives made of **high quality optical glass; CCIS® SC**. These new lenses are now multi-layer coated for **improved contrast** to enhance images even with weak slide stainings.

Together with a new tube lens, the result is a fully corrected, perfected intermediate image without colored fringes. The Trinocular BA210 gives digital access for even sharper imaging and improved digital output quality for **ultimate results at student level**.

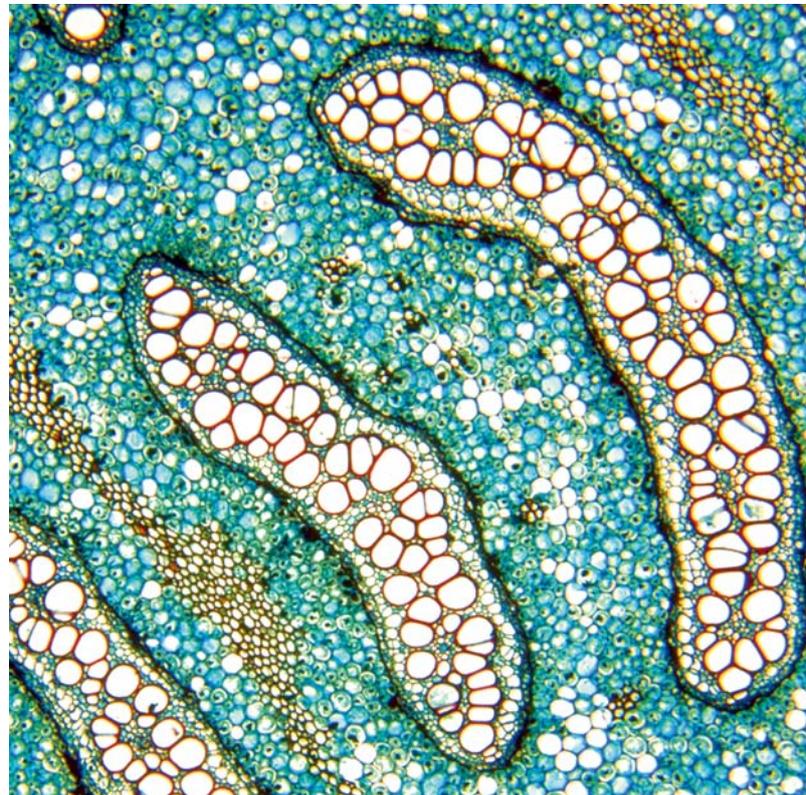

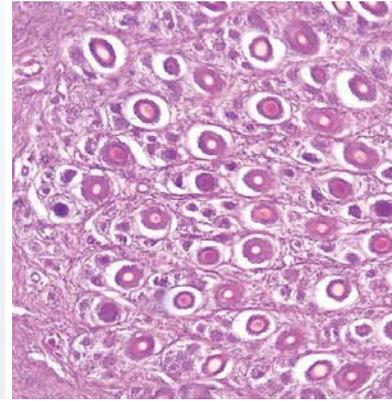

Magnification	N.A.	W.D. (mm)
Plan SC 4X	0.10	15.5
Plan SC 10X	0.25	17.4
Plan SC 40X, Spring	0.65	0.6
Plan SC 100X, Spring, Oil	1.25	0.14

Motic Plan SC

Eyepieces

Standard lockable eyepieces prevent inadmissible removal and confirms Motic's dedication to **student proof quality**.

Eyepiece Tubes

Designed with an **ergonomic viewing angle of 30°** and incorporating an **interpupillary distance of 48-75mm**, the BA210 observation tubes guarantee **fatigue-free viewing for hours**. A large field of view (20mm) enables fast and comfortable screening. The Trinocular tube allows digital documentation by using a wide variety of digital cameras, with a **20/80 light split for the Trinocular exit**.

Condenser Lock

Condenser

To ensure the perfect height adjustment of the condenser, a **condenser lock is integrated**. While using phase/ darkfield sliders, the teacher can **pre-set the condenser position** to prevent potential student mis-adjustments.

Stage

The BA210 comes with a **right hand control stage** and a new slide holder which enables consistent **sample movement across a 76x40mm range**.

The model also offers a hard **coated surface**, resistant against routine usage abrasion.

Rackless Stage

Rackless stage with extra safety feature

LED illumination

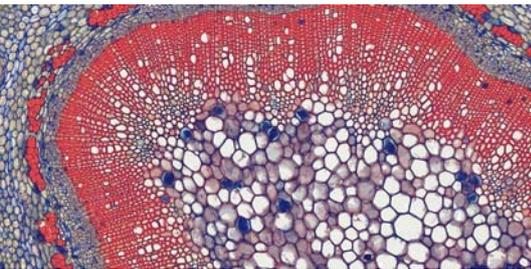

Illumination

The BA210 offers multiple illumination options such as **3W LED** or a **mirror**.

Anti-Fungus Design

To protect the system from fungus growth in high-humidity environments, an **anti-fungus treatment** is applied to prolong the life of both microscope and objectives.

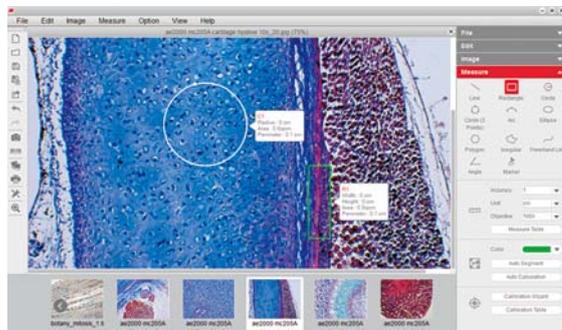

Documentation

The importance of documentation has expanded into every aspect of microscopy, as has the method of documentation. The BA210 is available with both a traditional method (photomicrography) and a digital method.

Standard Photomicrography

The traditional use of a **single lens reflex camera** (analogue or digital) requires the trinocular version of the BA210. The adaptation of the camera consists of a **mechanical adapter** combined with a **photo eyepiece** (2.5X or 4X). The necessary **T2 adapter** referring to the camera model is supplied by the camera manufacturer. This setup delivers high resolution images of small fields.

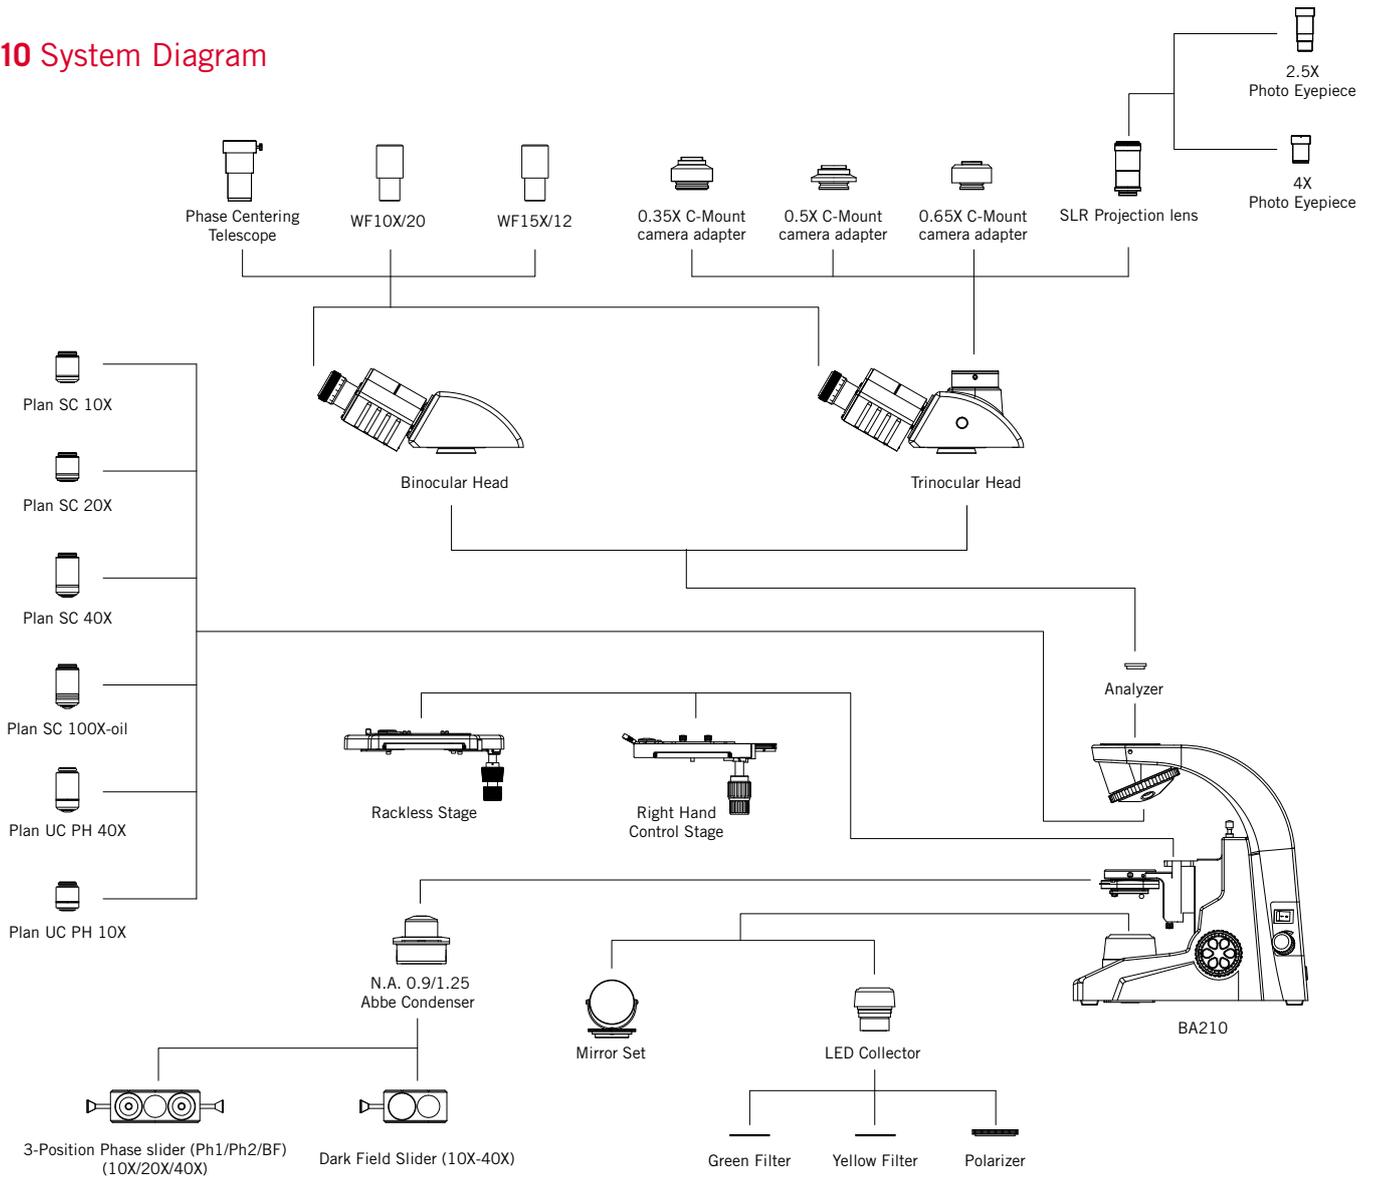

Digital Documentation

Digitalization of microscopic results is Motic's philosophy and the BA210 provides **two methods**.

The combination of the BA210 trinocular microscope **with the Moticam Series** of digital cameras delivers crisp live images easy to be saved. **All Motic cameras come equipped with software** to convert the BA210 into an analysis and documentation station. Should you select a third-party camera, Motic provides a **range of CCD-adapters** covering all demands for field vs. resolution.
